## Printed Chart Font Symbol Problems

There are several symbols in some of our charts, which do not display correctly in the Color and Symbol List. This is due to the fact that the publication software we use has glitches with these particular symbols. Once we discovered this problem, we no longer used the problem symbols. But many charts remain with incorrect symbols.

This problem usually consists of the fact that **symbols on the chart cannot be found in the Color and Symbol Listing**. Most likely, the color will be listed but the symbol is incorrect and will not appear on the chart.

The most common problem symbols are listed below. We hope you can locate the Incorrect symbol showing on your Color and Symbol Listing and replacing that symbol with the correct symbol shown below.

Incorrect Symbol    Correct Symbol

We most sincerely apologize for these problems and greatly appreciate your patience.
